

Effectiveness is the New Efficiency

How Intraprise TechKnowlogies Built a Hybrid Work Management System with DevStride

ABOUT INTRAPRISE

Intraprise TechKnowlogies is a non-traditional CPA firm focused on business transformation and holistic risk management.

Running 20–30 consulting projects at once, the firm needed a way to coordinate complex work across multiple methodologies and clients — without losing visibility or control.

THE CHALLENGE

Traditional project tools forced a choice: waterfall systems were too rigid, while agile platforms were too technical for consulting workflows. Managing status through email and spreadsheets led to fragmented visibility, inconsistent cadence, and excessive overhead.

“We weren’t looking for a faster way to manage projects. We were looking for a smarter way to deliver results.”

— Donny Shimamoto, Managing Director

THE SOLUTION

The turning point came with DevStride’s Item Hierarchies, which established clear relationships between projects, deliverables, and dependencies. Item hierarchies eliminated the need for manual workarounds.

Using workstreams, automations, and forms, Intraprise unified proposals, change orders, PTO, and capacity planning into one system, creating consistent accountability and predictability.

THE RESULTS

DevStride helps us anticipate issues, make better decisions, and deliver under budget, says Donny Shimamoto. With DevStride, we have:

- Visibility across 20–30 concurrent projects
- Reduced PM workload and email traffic
- Predictable cadence through automation
- Consolidated system replacing legacy tools

The Takeaway

DevStride gives Intraprise the infrastructure to manage hybrid methodologies at scale—combining the rigor of PMBOK with the agility of modern workflows. The result: fewer silos, faster insight, and a single operating system for transformation.

Effectiveness is the new efficiency—and DevStride makes it measurable.
