Building a Modern Operating Model for Continuous Value Delivery

The Client

Tenger Ways is a fast-growing technology consulting firm helping mid-market organizations move beyond project management to continuous value delivery.

The Need

To support that philosophy, the team needed a platform flexible enough to manage complex, multi-client work yet structured enough to tie every task to measurable outcomes.

The Breakthrough

After finding traditional tools too rigid, Tenger Ways chose DevStride to power its proprietary Digital Factory and Golden Thread frameworks, serving as the backbone of its value delivery model.

The Challenge:

Trapped in Complexity

Most project management tools were built for the industrial age.

No existing tool could support Tenger Ways' modern delivery frameworks or provide the transparency clients expected.

Rigid Framework

Traditional project tools were built for fixed processes, not adaptive frameworks.

Fragmented Ecosystem

Multiple disconnected systems created silos, duplicate work, and lost visibility.

Limited Traceability

Work couldn't be consistently tied to client goals or measurable outcomes.

The Solution:

Turning Complexity into Clarity

Tenger Ways adopted DevStride as its single operational backbone, a system flexible enough to mirror each client's workflow while enforcing a consistent, outcome-driven model across the firm.

Flexible Framework

DevStride adapts seamlessly to Tenger Ways' proprietary Digital Factory and Golden Thread frameworks.

Unified Solutions

A single platform replaces tool sprawl, keeping every client engagement connected.

Unparalleled Traceability

Every task links to business value, giving clients real-time visibility and measurable impact.

The Results

By running all client work through DevStride, Tenger Ways shifted from measuring outputs to measuring outcomes. Every work item is now linked to business value, fueling faster, more strategic decision-making and stronger client trust.

01 Arden Insurance Turnaround

When Arden Insurance struggled with a file-upload failure unresolved for 18 months, Tenger Ways used DevStride to map and prioritize the fix—resolving it in just two weeks and sparking a partnership that fueled growth and led to a private-equity acquisition.

02 100% Work-to-Value Traceability

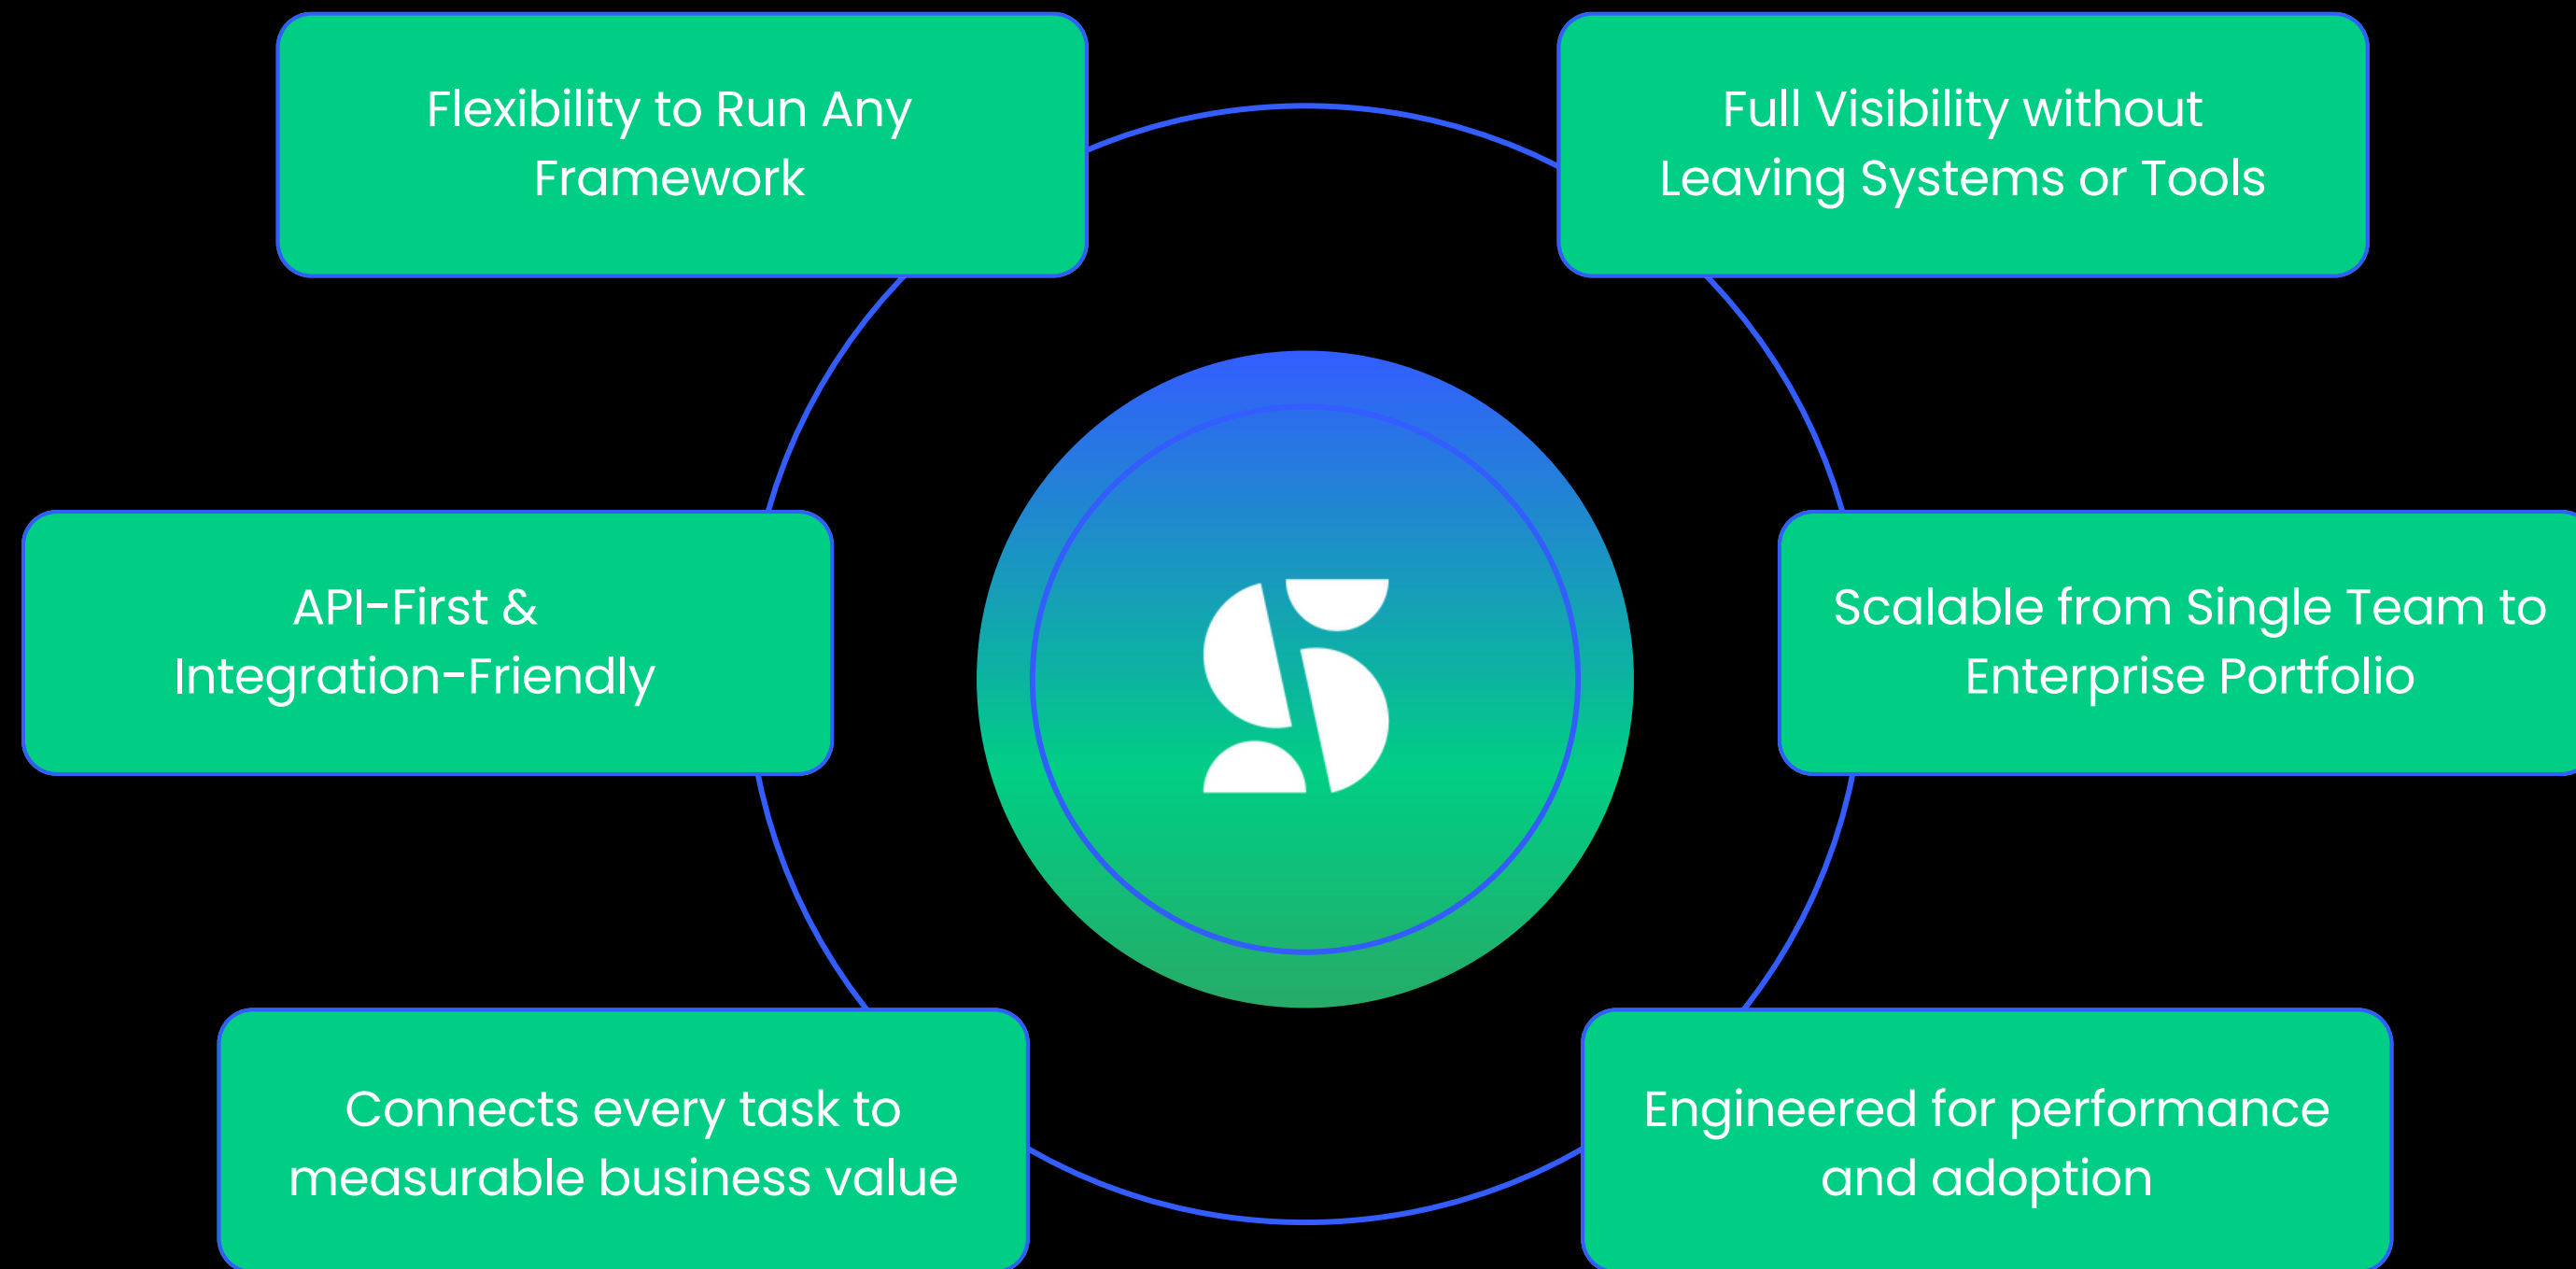

Golden Thread is now fully operationalized in DevStride. Every task traces to executive vision and business objectives, ensuring resources align to measurable outcomes.

03 Measured Business Impact

From 160 hours to a fraction. Tenger Ways measures outcomes, not effort—driving faster, smarter, more collaborative results with DevStride.

Why DevStride

DevStride is not another project management tool. It provides the infrastructure and workflows for measurable impact.

The Shift from Projects to Continuous Value

Daniel Keith

Owner

According to Daniel Keith, most organizations still operate with an “industrial-age” mindset: complete a project, move on, repeat.

In the AI era, that approach is obsolete. Modern practices demand continuous value delivery — measurable impact every day.

DevStride provides the flexibility and visibility needed to help clients make that shift, meeting them where they are while guiding them toward a more effective operating model.

“We can adapt to any client, any project, and always prove the value we deliver with DevStride.”
